

WIRELESS INPUT/OUTPUT AND PERIPHERAL DEVICES ON A GAMING MACHINE

ABSTRACT OF THE INVENTION

5 A disclosed gaming machine provides methods and apparatus for wirelessly
communicating between devices within the gaming machine. The gaming machine
includes a gaming machine housing to which a master gaming controller and one or
more gaming peripherals can be mounted. The master gaming controller is adapted for
executing a game of chance played on the gaming machine and communicating
10 wirelessly with the one or more gaming peripherals used to play the game of chance.
Furthermore, the gaming machine includes a wireless communication manager that can
manage wireless communications between the master gaming controller and the gaming
peripherals, between the gaming peripherals, or a combination thereof.
